

⚡ AI AUTOMATION WORKFLOW

Auto-Summarize Meeting Notes from Google Calendar

Turn every meeting into an instant, shareable summary. Capture key discussions, decisions, and action items the moment a meeting ends.

Presented By: Vaishnavi kulkarni | Cohort 42

THE PROBLEM

Information Chaos

Valuable meeting insights evaporate the moment the call ends.

Blurred Details

Back-to-back meetings make it impossible to retain key details by the end of the day.

Scattered Context

Notes live in siloed tools—Docs, Notion, email—making information hard to find later.

Missed Accountability

Without clear ownership, decisions are forgotten and action items fall through the cracks.

CURRENT STATE: DISCONNECTED

Who Is It For?

Solving the documentation bottleneck for anyone who manages projects, teams, or clients.

Product Managers

⚡ THE STRUGGLE

Back-to-back meetings and scattered notes make it hard to track decisions and action items.

🔍 LOST OPPORTUNITY

Misalignment on priorities and missed chances to course-correct roadmaps early.

Team Leads

⚡ THE STRUGGLE

Key takeaways from team syncs and reviews get lost in the noise of busy weeks.

🔍 LOST OPPORTUNITY

Reduced alignment and lack of clear accountability across the team.

Freelancers

⚡ THE STRUGGLE

Client calls generate ideas, but documenting requirements takes extra manual effort.

🔍 LOST OPPORTUNITY

Inconsistent deliverables and repeated cycles of clarification with clients.

Founders

⚡ THE STRUGGLE

High-value calls with investors & customers happen fast, with no time to capture notes.

🔍 LOST OPPORTUNITY

Key decisions get lost, reducing visibility and long-term knowledge retention.

Why It Matters

Moving from chaotic, manual note-taking to an automated system of record delivers immediate ROI.

Zero-Touch Documentation

Instant, consistent summaries generated automatically without any manual cleanup or formatting required.

Clear Accountability

Every action item is assigned an owner and a deadline, ensuring faster follow-ups and fewer dropped balls.

Persistent Knowledge Base

Decisions are stored in a standardized Google Doc format, creating a searchable history of your company's brain.

Total Alignment

Stakeholders stay aligned instantly without needing extra sync meetings just to recap previous meetings.

MEASURED IMPACT

30 mins

Manual Recap

3 secs

AI Automation

High Risk

Missed Actions

Zero

Ambiguity

Workflow design:

 **Input Source - Trigger(Google Calendar):**Google Calendar event ends. Description contains meeting notes- your raw input.

 **Automation Tool(Make (Internal Logic)):** A smart filter checks if the description contains your keyword.

 **AI Processing(OpenAI):** The AI reads your messy raw notes and rewrites them into a clean, professional summary.

 **Data Storage(Google Docs):** A new document is automatically created output goes to Google docs.

 **Output / Delivery(Gmail):** You receive an email containing the AI summary text AND a direct clickable link to the Google Doc.

Tool Stack Used:

A seamless pipeline that transforms raw notes into actionable intelligence without manual intervention.

What AI Does

Transforms raw, messy conversation logs into structured business data through five key processing steps.

Summarization

Condenses long transcripts into concise, scannable bullet points, removing filler and repetition.

EXAMPLE

Input: 500 word transcript

Output: • 3 Key Decisions •
2 Action Items

Entity Extraction

Identifies specific structured elements like names, dates, tools, and deadlines within the text.

EXTRACTION

"Sarah to finish by Friday"

Owner: Sarah
Due: Next Friday
Type: Task

Intent Detection

Differentiates between what was merely discussed versus what was actually decided.

ANALYSIS

"We agreed to launch v2"

Tag: **DECISION** (Not just a suggestion)

Classification

Categorizes meeting content into themes to make past decisions searchable and filterable.

TAGGING

Context: Budget review

Topic: Finance
Priority: High
Dept: Ops

Formatting

Ensures output follows a consistent, professional structure regardless of the input style.

STYLING

Raw: messy notes...

Edge Cases & Risks

Identifying where AI struggles and the mitigation strategies to ensure reliability.

Missing Input

THE PROBLEM

Meetings with vague descriptions ("Discuss roadmap") or no raw notes provide zero context for the AI to process.

✓ MITIGATION

Trigger workflow only if description >50 words; prompt organizer to add bullets.

Ambiguous Ownership

THE PROBLEM

Statements like "Someone should handle this" create orphaned tasks without clear accountability.

✓ MITIGATION

AI labels as "Owner: Unspecified"; highlights for quick manual assignment.

Hallucination Risk

THE PROBLEM

Model attempts to "complete" missing info, inventing deadlines or details not present in notes.

✓ MITIGATION

Strict system prompt: "Do not infer. If unclear, mark as unknown."

Sensitive Data

THE PROBLEM

Processing confidential HR or legal discussions through automation violates privacy expectations.

✓ MITIGATION

Auto-exclude events tagged "Private"; allow calendar-level opt-out.

Complex Meetings

THE PROBLEM

Strategy, hiring, and ops discussed in one call can lead to over-summarized or mixed-up outputs.

✓ MITIGATION

Chunk input by agenda section; generate section-wise summaries.

Jargon & Context

THE PROBLEM

Internal acronyms or slang may be misinterpreted or stripped out by the model.

✓ MITIGATION

Inject custom glossary into prompt context; periodic tuning.
